10 acmt.015.001.02 AccountExcludedMandate-MaintenanceRequestV02

10.1 MessageDefinition Functionality

The AccountExcludedMandateMaintenanceRequest message is sent from an organisation to a financial institution as part of the account maintenance process. It is the initial request message to update an account. Usage: this update is about account details excluding any mandate information.

If modification codes are not used: the organisation will specify under the "Account" and "Organisation" tags the complete information as it should be in the financial institution's records after processing the update request.

If modification codes are used (in that case, they must be used everywhere): the organisation will specify under the "Account" and "Organisation" tags which elements must be added, deleted, modified, or if they are unchanged.

Outline

The AccountExcludedMandateMaintenanceRequestV02 MessageDefinition is composed of 10 MessageBuildingBlocks:

F. AccountServicerIdentification

   Unique and unambiguous identifier of a financial institution, as assigned under an internationally recognised or proprietary identification scheme.

H. AdditionalMessageInformation

   Contains additional information related to the message.

I. DigitalSignature

Contains the signature with its components, namely signed info, signature value, key info and the object.

J. SupplementaryData

Additional information that cannot be captured in the structured elements and/or any other specific block.

12 acmt.017.001.02 AccountMandateMaintenanceRequestV02

12.1 MessageDefinition Functionality

The AccountMandateMaintenanceRequest message is sent from an organisation to a financial institution as part of the account maintenance process. It is the initial request message to update one or several accounts. Usage: this update is only about mandate information.

If modification codes are not used: the organisation will specify under the "Mandate" and "Group" tags the complete information as it should be in the financial institution's records after processing the update request.

If modification codes are used (in that case, they must be used everywhere): the organisation will specify under the "Mandate" and "Group" tags which elements must be added, deleted, modified, or if they are unchanged.

It is not possible to update the account characteristics or organisation information with this message.

Outline

The AccountMandateMaintenanceRequestV02 MessageDefinition is composed of 12 MessageBuildingBlocks:

A. References

   Set of elements for the identification of the message and related references.

13 acmt.018.001.02 AccountMandateMaintenanceAmendmentRequestV02

13.1 MessageDefinition Functionality

The AccountMandateMaintenanceAmendmentRequest message is sent from an organisation to a financial institution as part of the account maintenance process. It is sent in response to a request from the financial institution to send additional information. Usage: this update is only about mandate information.

If modification codes are not used: the organisation will specify under the "Mandate" and "Group" tags the complete information as it should be in the financial institution's records after processing the update request.

If modification codes are used (in that case, they must be used everywhere): the organisation will specify under the "Mandate" and "Group" tags which elements must be added, deleted, modified, or if they are unchanged.

It is not possible to update the account characteristics or organisation information with this message.

14 acmt.019.001.02 AccountClosingRequestV02

14.1 MessageDefinition Functionality

The AccountClosingRequest message is sent from an organisation to a financial institution as part of the account closing process. It is the initial request message to close an account.

Outline

The AccountClosingRequestV02 MessageDefinition is composed of 10 MessageBuildingBlocks:

A. References

   Set of elements for the identification of the message and related references.

B. From

   Identifies the business sender of the message, if it is not the account owner or account servicing financial institution. OrganisationIdentification6

C. AccountIdentification

   Unique and unambiguous identification of the account between the account owner and the account servicer.

D. AccountServicerIdentification

   Unique and unambiguous identifier of a financial institution, as assigned under an internationally recognised or proprietary identification scheme.

E. OrganisationIdentification

   Identification of the organisation requesting the change.

F. ContractDates

   Specifies target dates.

G. BalanceTransferAccount

   Identification of the account to which the remaining positive balance of the account to be closed must be transferred or account from which funds can be moved to the account to be closed and which balance is negative. This account must be held in the same financial institution as the account to be closed if the transfer account is used to compensate a negative balance. For a positive balance to be transferred, an account in another financial institution might be used. In that case the account servicer is mandatory.

H. TransferAccountServicerIdentification

   Unique and unambiguous identifier of a financial institution, as assigned under an internationally recognised or proprietary identification scheme, that is the servicer of the transfer account.

I. DigitalSignature

   Contains the signature with its components, namely signed info, signature value, key info and the object.

J. SupplementaryData

   Additional information that cannot be captured in the structured elements and/or any other specific block.

15 acmt.020.001.02 AccountClosingAmendmentRequestV02

15.1 MessageDefinition Functionality

The AccountClosingAmendmentRequest message is sent from an organisation to a financial institution as part of the account closing process. It is sent in response to a request from the financial institution to send additional information.

Outline

The AccountClosingAmendmentRequestV02 MessageDefinition is composed of 10 MessageBuildingBlocks:

A. References

   Set of elements for the identification of the message and related references.

B. From

   Identifies the business sender of the message, if it is not the account owner or account servicing financial institution.

C. AccountIdentification

   Unique and unambiguous identification of the account between the account owner and the account servicer.

D. AccountServicerIdentification

   Unique and unambiguous identifier of a financial institution, as assigned under an internationally recognised or proprietary identification scheme.

E. OrganisationIdentification

   Identification of the organisation requesting the change.

F. ContractDates

   Specifies target dates.

G. BalanceTransferAccount

   Identification of the account to which the remaining positive balance of the account to be closed must be transferred or account from which funds can be moved to the account to be closed and which balance is negative. This account must be held in the same financial institution as the account to be closed if the transfer account is used to compensate a negative balance. For a positive balance to be transferred, an account in another financial institution might be used. In that case the account servicer is mandatory.

H. TransferAccountServicerIdentification

   Unique and unambiguous identifier of a financial institution, as assigned under an internationally recognised or proprietary identification scheme, that is the servicer of the transfer account.

I. DigitalSignature

   Contains the signature with its components, namely signed info, signature value, key info and the object.

J. SupplementaryData

Additional information that cannot be captured in the structured elements and/or any other specific block.
